CYBERSOC

Incident Response and Security Services

CyberSOC® footprint is well noticeable in Nigeria and the African market. Major enterprises and Government institutes already chose CyberSOC® as their preferred Cyber Security firm and we hope that so would you.

PROTECTING AFRICA'S DIGITAL FRONTS

CyberSOC® was founded to address the tremendous challenges in protecting organizations from cyber-attacks across Africa.

The ever-increasing cyber threats, risks and exploits along with the global shortage of cyber security experts especially in the African market were the foundation on which CyberSOC® was established in 2015 and has grown to become the major Cyber Security firm in Nigeria and other countries across Africa.

Led by Cyber Security veterans from various fields of expertise and military grade experience, the company has grown to become a major player in the African market with unprecedent local cyber security team and fully operational SOC to support our customers and local partners.

The company is running a full 24/7/365 SOC along with a strong Incident Response team that are also acting as a Computer Emergency Response Team (CERT) to Government.

Our Services are divided into 2 major silos: Threat Detection and Threat Response which gives our customers the flexibility and agility in the detection phase but also gives them the capacity to swiftly respond to any threat or incident in a manner that minimizes or eliminates the impact of the cyber attack/exploit on the organization or business.

CyberSOC® solutions are modular and serve both large and mid-size companies, enabling them to focus on their core business knowing that their cyber security posture is at the highest standard and ever improving.

Larger enterprises that have the capacity to run their own SOC are also enjoying our in-house capacity in SOC designing, building, staffing and training as a Turnkey Project.
