

CYBERLAB

INTELLIGENCE & RESEARCH

PROTECTING AFRICA'S DIGITAL FRONTS

Cyber Threat Intelligence is based on the gathering of massive data using various sources such as publicly available web sources, social media channels, honey pot techniques, collection from the deep and dark web. Cyber Threat Intelligence mission is to monitor and alert of immediate risk (Tactical approach), research and analyze trends, technical developments of threats and threats actor in the fields of cybercrime, hacktivism and cyber espionage.

CyberLAB Africa is the no. 1 choice for cyber threat intelligence in Africa

We think global and act local. Nigeria for example has over 500 languages - our Cyber Threat Intelligence analysts know where to look, and in what language (local dialects and even pidgin English). We understand the crime motivators, cyber-criminal behavior as well as the mindset in order to identify the crime chain. We use international-grade platforms that crawl for information around the globe - looking for Africa-specific threats.

Actionable

Mitigate cyber-attacks and make the necessary adjustments to the organization's security systems and procedures. Re-configure and adapt security measures as well as implement new technologies.

Invisible

Cyber criminals are not aware of our presence. The platform spies and collects valuable information, keeping analysts hidden while providing them with full control and the liberty to do everything in their power to find and neutralize threats.

Real-time

Receive real-time alerts and reports for your cyber defense and IT teams. Get notified about risk status, level and components.

Everywhere

From social networks, to the deep web and dark web, CyberLAB Africa is creating and collecting valuable intelligence that produces real results.

PROTECTING AFRICA'S DIGITAL FRONTS

Pan-African support:

CyberLAB Africa provides threat intelligence in Nigeria, Kenya, Benin Republic, Togo, Ghana, Angola, Morocco, Ethiopia, Tanzania, Kenya, Uganda, Rwanda, Central Africa, Senegal, Cameroon and more.

Next generation digital defense platform

We have developed a unique cyber threat intelligence platform that is specifically designed for the African cyberspace. It knows where and what to look for. Our analysts use it to gain criminals' trust in order to manufacture gold intelligence that produces real results, such as helping local law enforcement prevent crimes as well as minimizing and solving fraud cases.

Total brand protection:

Designed to complete your cyber defense and provide total brand protection, CyberLAB Africa's threat intelligence allows you to detect negative discussions on social media and forums and protect from stolen credentials, typosquatting domains, company imposters, phishing websites and more.
